

Module 2

Objective

In this module we will implement a design.

Your task is to deliver a implementation of a one-page for desktop in HTML + CSS format, following the requirements defined by the client. The focus is delivering the implemented design (using only HTML and CSS), not the functionalities.

You will find the design that needs to be implemented in Google Drive folder Extras -> Module 2 -> Design_to_be_implemmented.jpg file. In the same folder you will also find the assets you need for this page.

Rules

- The images should be in a folder named “images.”
- Use classes and ids. Do not write inline CSS.
- Have all the CSS code in a file called style.css.
- The page title should be “Page impremented by me”

The text can be generated lorem ipsum text or any text available to you. You don't need to put the write by hand the text from the design.

Please note that this challenge focuses on the implementation aspect of the website, so you need to implement write code as standard and as clean as possible. The goal is to write html css code to the highest possible standards.

Instructions to the Competitor

Please follow the following instructions to deliver your work.

- The media files are available in the media file. You can modify the supplied files and create new media files.
- Save your design files in a folder called “XX_Implementation_Module” where XX is the your desk number.
- File name of the html will be in a format like “XX_page.html” where XX is your desk number.

Good luck!
